

ENERGY AND DECARBONIZATION POLICY

The purpose of this policy is to enhance Tenneco's operational performance by reducing energy waste and energy-related costs while addressing climate change concerns. This policy defines our strategy to reduce greenhouse gas emissions and improve cost efficiency in-line with Tenneco's goals, while meeting customer requirements, regulatory obligations, and stakeholder expectations for sustainable operations.

Our energy management strategy will focus on the following pillars:

To facilitate low-carbon electricity procurement, we will:

- Prioritize on-site solar, off-site solar and wind, and other technologies
- Implement off-site power purchase agreements (PPA's)
- Adapt sourcing to regional grid conditions and policies, and available low-carbon options.

To optimize energy efficiency in our operations and buildings, we will:

- Minimize energy demand through process improvements
- Reduce idle time and enhance process efficiency
- Invest in cost-effective, high-efficiency systems and equipment
- Engage employees in identifying and implementing energy-saving opportunities
- Conduct site energy audits
- Track energy data to support regular progress reviews towards objectives and targets
- Integrate energy analysis into our capital budgeting and procurement processes

We will apply a cross-functional governance structure, track implementation and have continuous improvement cycles to ensure the success of our initiatives.
